

Problem-Solution fit canvas - Auto Ticket Classification

Purpose / Vision: automatically classify school IT tickets and confirm to the Caller

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS - School staff (Callers) who report IT issues in ServiceNow - IT support team members who handle the tickets	6. CUSTOMER CONSTRAINTS CC - Only a short description of the issue is entered; Category and Subcategory may be left empty - Classification depends on keywords in the Short Description - Needs ServiceNow access and the Caller's email address	5. AVAILABLE SOLUTIONS AS - Manual classification of each ticket by IT staff, or the Caller choosing a Category - Pros: flexible. Cons: slower, can be inconsistent, no automatic confirmation [draft, validate with users]	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P - Report IT issues: Wi-Fi / Network, Projector, Forgot password, Slow Computer - Get tickets a consistent Category and Subcategory - Know that the request was received	9. PROBLEM ROOT CAUSE RC - Tickets are classified manually from the Short Description - There is no automatic rule or acknowledgement when a ticket is created	7. BEHAVIOUR BE - Caller creates an incident with a Short Description and leaves Category empty - IT team reads the ticket and classifies it manually - Caller waits without confirmation	
Identify strong TR & EM	3. TRIGGERS TR - A school IT problem occurs (e.g. projector not working before class) and the Caller creates an incident - Record Created with Category is Empty starts the flow	10. YOUR SOLUTION SL - Flow Auto Classify School IT Tickets in Flow Designer (Global application) - Trigger: Record Created on Incident Workflow, Category is Empty - If / Else If on Short Description, then Update Record sets Category and Subcategory - Send Email to Caller with the subject Your Request for the issue has been submitted. - Status: in progress (configuring the trigger)	8. CHANNELS of BEHAVIOUR - 8.1 ONLINE CH - Caller creates the incident in ServiceNow - Caller receives the confirmation email	Extract online & offline CH of BE
	4. EMOTIONS: BEFORE / AFTER EM - Before: uncertain, frustrated about whether the issue is handled - After: reassured that the request was submitted (confirmation email)		8.2 OFFLINE Informing IT staff in person or by phone [Confirm offline channels used at the school]
