Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	

Test Scenarios & Results

Draft test plan. Actual Result and Pass/Fail are blank until the flow is activated and tested.

Test Case ID	Scenario (What to test)	Test Steps (How to test)	Expected Result	Actual Result	Pass/Fail
FT-01	Trigger (Record Created, Incident Workflow)	Create a new Incident Workflow record with Category empty	Flow runs for the new record		
FT-02	Wi-Fi / Network classification	Create a record with Short Description containing "Wi-Fi" or "Network"	Category: Network, Subcategory: Wi-Fi		
FT-03	Projector classification	Create a record with Short Description containing "Projector"	Category: Hardware, Subcategory: Projector		
FT-04	Forgot password classification	Create a record with Short Description containing "Forgot password"	Category: Access, Subcategory: Forgot Password		
FT-05	Slow Computer classification	Create a record with Short Description containing "Slow Computer"	Category: Performance, Subcategory: Slow Computer		
FT-06	Email notification (Send Email)	Create a record with a Caller and check the Caller's email	Email sent to Caller > Email with subject "Your Request for the issue has been submitted."		
FT-07	Category is not empty	Create a record with Category already filled	Flow does not run; Category is unchanged		
PT-01	Flow execution time	Check the flow execution details for a test record	Flow completes without errors [Confirm target time]		
PT-02	Multiple records created together	Create several test records one after another	Each record is classified correctly, no flow errors
